Help

A phylogenetic tree visualization showing relationships between various taxa. A context menu is open over node N43, listing actions such as 'Zoom into branch', 'Go to subtree at branch', 'Show node info', 'Download branch as newick', 'Collapse branch', 'Select node', 'Select clade', 'Edit node style', 'Root on this node', 'Move branch up/down', 'Sort branch/tree', and 'Remove branch'. The tree includes a scale bar at the bottom left labeled '0.025' and a label 'B' at the bottom center.

A heatmap visualization showing the distribution of 'random\_type' across two samples, 'sample1' and 'sample2'. The y-axis represents the 'random\_type' categories, and the x-axis represents the samples. The heatmap is color-coded, with a legend on the left indicating 'high' (red), 'low' (blue), 'medium' (green), and 'NA' (grey). The heatmap is labeled 'D' at the bottom left.

A legend for the 'random\_type' variable, showing a color scale from 0.050 to 0.960. The legend includes a color key for 'high' (red), 'low' (blue), 'medium' (green), and 'NA' (grey). The legend is labeled 'E' at the bottom left.

A small phylogenetic tree visualization showing relationships between various taxa. The tree is labeled 'C' at the bottom left.
